Masonry Heaters

978-660-8612

These high-efficiency wood burning systems provide a source of heat using far less firewood than woodstoves. The fuel load is burned rapidly and at a higher temperature resulting in lower CO2 emissions, reducing pollution. The resulting heat is stored in the masonry mass then radiates into the room for the next twelve to twenty-four hours. The quality of the radiant heat they provide is even and gentle with the added benefit of a healthier indoor environment.

Stone Masonry Heater

- **Efficient use of Fuel** – with a renewable/ sustainable energy source
- **Safe and Clean** – burns at higher temperatures substantially reducing creosote and pollution
- **Aesthetically Pleasing** – custom designs, choice of finish materials
- **Traditional** Finnish Contraflow and Russian Masonry Heaters

Jeremy R. Brown,

Proprietor of Hillcrest Masonry, is working to re-introduce the long-established practice of heating with Masonry Heaters. He has worked independently and in collaboration with other master masons. His experience includes building Masonry Heaters to restoring fireplaces and chimneys in many antique homes on the North Shore.

Hillcrest Masonry is a proud member of the Masonry Heater Association, for more information:
